Subject: RE: E. Liverpool OH public meeting - UPDATE

Hi Shilpa – Is OEPA keeping you updated on Mn concentrations at the water plant? The data through May 2013 have been reported.

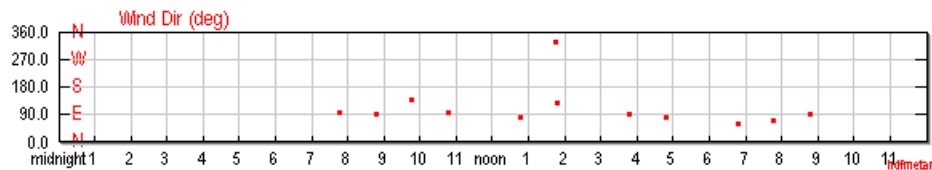

There aren't a lot of big peaks, but I thought you might be interested to know that there were a couple biggies. March 5th the TSP-Mn concentration was **8.1 ug/m3** and May 7th up to **13.0 ug/m3**. Both dates had East prevailing winds (see wind data from Beaver Falls, PA, airport pasted below). For comparison, there were dates in 2005-07 as high as 25 ug/m3. Do you have any idea what was going on at SHBell on those days?

It remains to be seen how 2013 will compare to 2011-12, but so far the year is higher overall (but not comparable to '05-'07).

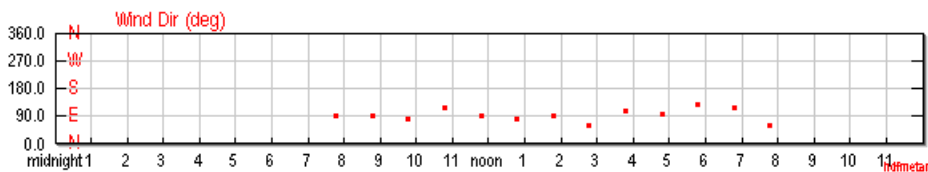

Let me know if you have any questions or thoughts on this. -Motria
